Protocol Analyzer:

It is hardware decoding, may log protocol data very long time if without waveforms.
Application timing: Preliminary protocol debug.

Support multiple protocols with different operating modes

Real-time data search

Logic Analyzer:

Built-in DSO to capture analog waveforms to compare with the digital waveforms.

Provides multiple storage modes, users could select to have long time recording or precision acquisition.

Each channel supports both digital and/or analog waveforms measurements, voltage resolution can be changed between 2 levels for all channels at the same time.

Digital waveform

Threshold: CH 00 - 07: 1.60 V, CH 08 - 15: 1.60 V

Enable Extra Hysteresis: CH 00 - 07, CH 08 - 15

Analog waveform

Input Sensitivity: CH 00 - 07: 10 mV/Div, 5 mV/Div; CH 08 - 15: 10 mV/Div, 5 mV/Div

— Extra Hysteresis OFF (More sensitive)

— Extra Hysteresis ON (Lesser noise)

Vertical Range: $\pm 20V \rightarrow \pm 10V$

Resolution: 10mV \rightarrow 5mV

Compare digital and analog waveforms at the same channel for statistics.

Time/Div = 2 us

Acquired: 15:20

Channels: CH-00, CH-01, DSO CH0, DSO CH1, DSO CH8
