# Chapter 1 Installation

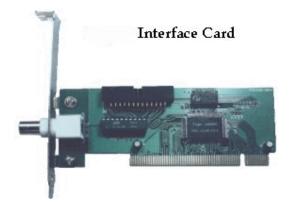

# Hardware

#### The TravelLogic series or the PKLA1616+:

Connect the device with the PC. (USB port)

Insert the driver installation disc when the Windows OS detects the device.

#### The LA2164P-2M with the PCI interface:

Open the PC case.

Insert the PCI interface card into the PCI bus of the PC.

Insert the device mainframe into the 5.25" floppy disk slot of the PC.

Connect the PCI interface card with the Data Port of the device. (PCI cable)

Plug the PC power connector (5V, 12V) into the power connector of the device. (4PDC-Jack cable)

#### The LA2164P-2M with the USB interface or the printer port interface:

Connect the device with the PC (printer round cable or USB2Printer cable).

Plug the power adapter into the LA power connector.

(For USB interface) Insert the driver disc for installation when the Windows OS detects the device.

(For Parallel interface) The parallel configuration is EPP mode in the BIOS setting.

#### External Interface for the Pocket-LA/TravelLogic

Connect the PC with the device. (USB port)

Insert the driver disc for installation when the Windows OS detects the device.

# Software

Insert the software disc into the CD-ROM drive.

Run Setup.exe.

# Driver

The driver setup for different combinations of the interface and Microsoft Windows OS is:

#### The printer port interface + Windows XP/ Vista/ 7/ 8:

Run the software setup but the driver setup is needed.

#### The PCI/USB interface + Windows XP/ Vista/ 7/ 8:

Follow step a-j below,

- **a.** Turn on the PC after the hardware installation.
- **b.** Insert the installation disk into the CD-ROM drive.
- **c.** Double click "Add/Remove Hardware" in the Control Panel.
- **d.** Choose "Add a Device", the Windows OS will check the PC's hardware device.
- e. If there is no available hardware device, please select "Add a new device".
- **f.** Choose "Display all devices" under Windows XP etc.
- g. Click "Have Disk...".
- **h.** Choose "Acute EPP & ISA Interface Driver" from the installation disk.
- i. You will find the "Acute PC-based Instrument" item in the Device Manager.
- **j.** If you still can't set up the driver, please check the FAQ on our web site at www.acute.com.tw.

### Accessories

Connect the signal (A, B, C and D) to the LA2164P-2M ports A, B, C and D.

Connect the signal cable (16 pins) and the ground cable (2 pins) to each signal pod.

Connect the probes to the signal cable and the ground cable.

Connect the probes to the subject under test (the ground probes must be connected to the ground of the subject under test).

# State Analysis:

### Mark the invalid waveform

If the Pre-Trigger is not enabled, then the waveform before the trigger cursor is invalid will

be marked as dots.

Time/Div:	5 ms	<b>7</b> 🖡				
Acquired:	17:33:3		8 ms	16 ms	24 ms	32 ms
СН-00	O	.6m	2.65m 2.85n	n 2.65m 2.65	m 2.6m	2.75m
СН-01	1		ЛЛ		2.1m	2.1m

If the logic analyzer is stopped when capturing data, then the waveform on the right of the waveform window is invalid and will be marked as dots.

Time/Div:	160 ms 🕻	7 (	<b>P</b>				
Acquired:	17:33:3			256 ms	512 ms	768 ms	1.0248
СН-00	O						
CH-01	1						

### Other

#### Create Bus(Signal) Wizard

Click Create Bus (Signal) Wizard button ( ) on Toolbar to show the dialog box below.

Bus(Signal) Wizard		×
Select a wizard		
8 LA Channels         16 LA Channels         18 LA Channels         32 LA Channels         34 LA Channels         35 LA Channels         64 LA Channels         8 LA Channels         8 LA Channels         8 LA Channels and 2 DSO Channels         8 LA Channels and 4 DSO Channels         1 DSO Channel         2 DSO Channels         3 DSO Channels         5 DSO Channels         5 DSO Channels         6 DSO Channels         1-Wire         7-Segment         A/D Converter		This wizard could create fewer channels than needed due to the logic analyzer model or the bus trigger selected.
CAN Closed Caption HDMI-CEC	•	
With color		OK Cancel

#### Select Command Set

Select Command Set ( ) is for the state analysis but not a default button on the Toolbar

menu.

Select Command S	et		×
Command Set:			
TEST			•
Command List:			Up Down
Name	Condition	Description	
tt	A=0h	OUT DX.AX	
Test	Bus=7h	Bus = 7h	
•			F
Add Cmd Set Del C	Cmd Set Add Cmd	Del Cmd OK	Cancel

Add Select Command Set button from Toolbar  $\rightarrow$  Toolbar Buttons and click it to show the dialog box below; there are 4 quick settings - add command set (Add Cmd Set), delete command set (Del Cmd Set), add command (Add Cmd) and delete command (Del Cmd). The command set must be saved as \*.CMS, similar to the Windows Excel file \*.CSV, so you can edit the command set in Windows Excel and load it into the LA Viewer.

A command set has three fields:

Name: The command name that must be exclusive.

**Condition:** A command has up to 3 conditions, where each condition has its own label and value.

**Description:** The constant or variable in the Description field will be shown in the State

analysis on the Waveform Window when the command conditions are met. A variable contains a label name within the bracket {} or will be seen as a constant; also, the label name must be a label name in the current project or will be shown as "\*\*\*". One command can have three variables at most.

#### Add Command

Only decimal (xxx), hexadecimal (xxxh), octal (xxxo), or binary (xxxb) values can be entered in the value columns (Value  $1 \sim 3$ ).

Add Command	×
Name	Write
Label 1	Bus
Vaule 1	35h
Label 2	Addr
Value 2	11110000b
Label 3	
Value 3	
Description	MOV AX, [{Addr}]
🗖 Has	Sub-Command Cancel

#### **Time/State Switch**

The Time/State Switch button ( ) is a switch between the timing analysis and the state analysis shown on the Waveform Window.

#### **Thumb Track Scroll**

The Thumb Track Scroll button () is to drag the horizontal scroll bar and the waveforms simultaneously. If disabled, the waveforms only move until you stop dragging the horizontal scroll bar.

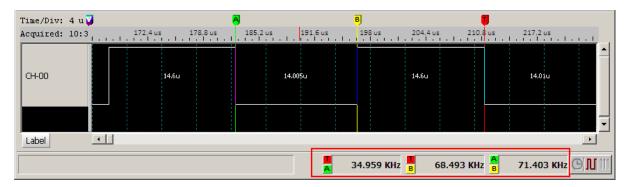

#### Measure Frequency, Timing or Sample Clocks

You may check the frequency, timing, or sample clocks between any two cursors on the

Waveform Window as the three windows below. There are three display fields at the bottom of each window; the switch button ( ) on the lower-right corner of each window is to switch among frequency, timing, or sample clocks.

#### Frequency:

#### Timing:

Click any cursor button to display the cursor menu below to choose any two buttons to

measure the frequency, timing, or sample clocks between them.

A 10 ns	100 ns	A 90 ns 🕒 🛄 🎁
	Cursor T	
	Cursor A	
	Cursor B	
	Cursor C	
	Cursor D	
	Cursor E	

#### Zoom In/Zoom Out

There are several ways to zoom in and/or zoom out:

Click Waveform  $\rightarrow$ , click Zoom In/Zoom Out.

Zoom In or Zoom Out toolbar buttons.

Press +/- on the keyboard to zoom in/zoom out.

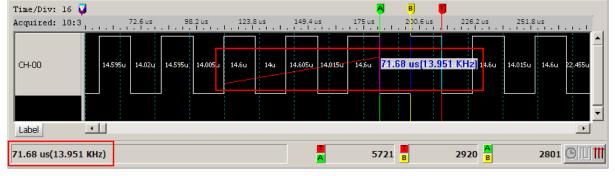

Scroll the mouse wheel on the waveforms to zoom in/zoom out.

Right-click on the waveforms and click Zoom Area to zoom in.

#### Waveform Window

Drag or flick the waveforms.

Measure the time between two waveform edges: Press Ctrl + drag the mouse between two

waveform edges to show the time between them.

Scroll the mouse wheel to zoom in/out waveforms centered on the mouse cursor.

Right-click and drag the selected waveforms to see the number of transition, time interval,

and frequency between the two waveform edges.

Zoom Area will display on the lower-right corner of the selected waveforms; click Zoom

Area to zoom in the selected waveforms.

#### **Report Window**

Right-click the Report Window to show the menu below.

	Find	Ctrl+F		
	Find in Column			
	Find Next	F3		
	Fit Header to Data			
	Fit Header to Name			
	Data Measurement			
	Timestamp/Sample Toggle			
	Report All Signals			
	Report Selected Signa	ls		
	Report Transitions			
	Report Data Measuren	nent		
	Report (Bus)			
	Close Report			
4	Save report to file			

#### Find

Find data in the Report Window; click Find to set more parameters in the Find Report dialog

box below.

Find Report	X
Find what:	•
Match Whole Word Only	Direction O Previous
	Find Cancel

Match Whole Word Only: Match all characters in Find What.

Match Case: "A" and "a" represent different characters in Find What.

Direction: Find the previous/next-matched data.

#### Find in Column "XX"

Find data in a certain column.

#### Find Next

Find the next-matched data.

#### Fit Header to Data

Adjust the column width according to the data width.

#### Fit Header to Name

Adjust the column width according to its name width.

#### **Report All Signals**

Display all data except bus decode in the Report Window.

#### **Report Selected Signals**

Display the selected data in the Report Window.

#### **Report Transitions**

Display the transitions and rising edges and falling edges in the Report Window.

#### **Report Data Measurement**

Display the channel measurement in the Report Window.

#### Report ()

Display the bus decode data in the Report Window.

#### **Close Report**

Close the Report Window.

#### Save report to file

Save the report as a file.

#### Show the timing in the Waveform Window

Click the Show the timing in the Waveform Window button (

waveform transitions in the Waveform Window.

0u 20u 20.01u 20u 20u	201 20.010 200 200 20
40.01u 40u	(40u) (40.01u)
80.01u	80.01u

#### **Shade Alternate Channels**

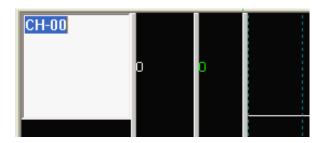

Click the Shade Alternate Channels button (=) to shade alternate channels with 2 different

colors to better view the waveforms.

						LП
						$\int$
				1		

#### Modify the label name

Click the Label Name for 1 second to modify the label name.

#### Generate a Bitmap File

Click the Generate a Bitmap File button ( **E**) to save the waveforms in format like PNG,

JPG, GIF, BMP, or TIFF.

#### Copy to clipboard

Click the Copy to clipboard button ()) to copy the waveforms to the clipboard.

Undo

Sort...

# Auxiliary

	лŗ	Add A Signal
Auxiliary Label Menu		Add Group(Bus)
Right-click the label field to show the auxiliary label menu		Add Bus Decode
below.		Add All Labels
Undo: Undo the previous changes on labels.		Delete Unused
Add A Signal: Create a channel.	Лľ	Delete Selected
Auu A Signai. Create à chaimer.		Delete All Labels
Add Group(Bus): Create group channels (bus).		Import Labels
Add Bus Decode: Create a bus decode channel.		Modify Name
Add All Labels: Create all channels. The "Delete the current		Configure
labels?" dialog box will show, if click yes, the exiting labels		Combine
will be deleted.		Arrange
Add All Labels		Decompose

Add All Labels	즤
Delete the current labels?	
<u>是(11)</u> 否(11) 取消	

**Delete Unused:** Delete the unused (shaded) labels.

**Delete Selected:** Delete the selected label. Right-click the selected label to delete or click the selected label and press the Delete key.

Delete All Label: Delete all labels.

Modify Name: Modify the label name. Any label name must be exclusive with no more than

31 characters including symbols like [,], \_, -, !, ~, and are case sensitive.

**Configure:** Configure the labels.

#### **Combine:**

Combine Labels			×
Group Label Name:	SPI		
Source:		Destination:	
CH-05 CH-06 CH-07 CH-08 CH-09 CH-10 CH-11 CH-12		CH-00 CH-01 CH-02 CH-03 CH-04	LSB
CH-13	<b>_</b>	1	MSB
Color White	•	OK Cance	1

Combine the selected labels to form a group channels (bus). Select labels in Source

(Destination) and click  $\rightarrow$  ( $\leftarrow$ ) to add (remove) labels to (from) the group.

#### Arrange:

Combine L	abels		×
Group Label Name Color	Bus 1	White 💌	
Source CH-00 CH-01 CH-02 CH-03 CH-04 CH-05 CH-06 CH-07 CH-08	Add> < Remo		LSB Move Up Move Down
			OK Cancel

Arrange the order of all labels in a group channels (bus).

Decompose: Right-click the group channels (bus) to decompose into individual labels with

new names.

**Sort:** Sort all labels in alphabetical order.

## Activity Auxiliary

Right-click the Activity Field to show the menu below.

1<sup>°</sup>1 Activity Hz Activity freq. in CHO

Activity: Show the state of the selected channel.

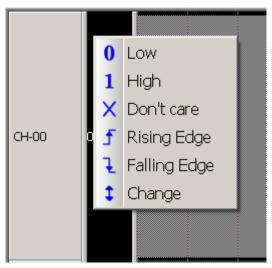

Activity freq. in CH-X: Show the frequency of the selected channel and one channel ONLY.

### Simple Trigger Auxiliary

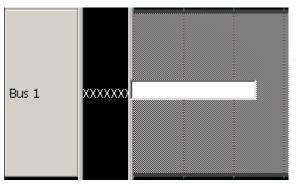

Right-click any Trigger field to show one of the two menus below to set the trigger:

#### Signal

Only one trigger (channel) can be set as Rising Edge  $\uparrow$ , Falling Edge  $\downarrow$  or Change  $\updownarrow$ .

#### Group

Only five types of codes can be entered:

Hexadecimal code (nnh), e.g. 3Ah.

Octal code (nno), e.g. 570.

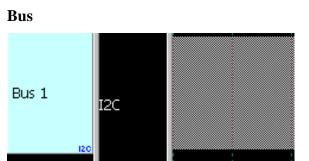

Binary code (nnb), e.g. 110010b.

ASCII code ('X'), e.g. 'A'.

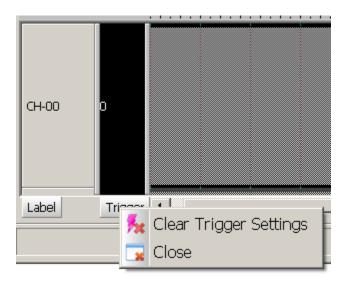

Decimal code (nn), e.g. 35.

Blank cancel settings.

Right-click the Trigger button to show the menu below.

**Clear Trigger Setting:** Clear the trigger settings.

**Close:** Close the Trigger field.

## **Easy Start**

Follow the steps below to easily run the LA Viewer.

- **a.** Execute the LA Viewer programs ( [6]).
- **b.** Click the **Threshold Settings** button (1) to set the threshold voltages according to the target system signals.
- **c.** Right-click the label field to show the label menu.
- **d.** Set up labels with names, channel numbers, and colors. The label name must be no more than 31 characters that can be text, numbers, or symbols.
- e. Click the Hardware Settings button ( S/R: 100 MHz) to set the sampling rate which ideally should be 5-10 times of the frequency of the target signal.
- **a.** Click the **Trigger Settings** button ( $\square \lor$ ) to set up trigger conditions.
- **b.** Connect the instrument's ground lines to the grounds of the target system.
- **c.** Connect the grippers to the target system according to the defined label names.
- d. If you want to measure the state, select External (synchronizing) from the Hardware Settings ( S/R: 100 MHz) and connect the clock channel to the target system as the clock source, then click the Time/State Switch button ( ) to the state analysis on the Waveform Window.
- e. Move the trigger cursor (T) to the Waveform Window.
- **f.** Click the Acquire Data button (**()**).

## Cursors

There are 26 (A~Z) cursors available, but only 6 cursors (T, A, B, C, D, E) are shown on the Waveform Window by default.

Click the Add Cursor/Delete Cursor button ( ) to add/delete cursors or press Shift + key to add the cursor.

There are several ways to move cursors in the Waveform Window.

Drag the cursor tag.

Drag the cursor.

Use  $\leftarrow$  or  $\rightarrow$  ( $\uparrow$  or  $\downarrow$ ) to move the cursor in the timing (state) window.

Press A - Z to display cursor A-Z in the center of the Waveform Window.

Press Shift + A-Z to move cursor A-Z to the mouse cursor.

 $Press\ Ctrl+drag\ any\ cursor\ except\ cursor\ E\ to\ move\ two\ cursors\ (any\ dragged\ cursor\ and$ 

cursor E) together. The default of the tracking cursor is cursor E. You can also change the

tracking cursor in the System Environments, to set the tracking cursor specified with A-E.

# Field Adjustment

Move the field splitter to adjust the size of any field (Label, Channel, Value, Activity, Simple Trigger in timing analysis, or Channel, Comment in state analysis) or the Waveform Window.

# Hot Key Definition

	Items	Hot Key
1.	Display the waveform window centered on cursor A - Z	A-Z
2.	Display cursor A ~ Z at the mouse cursor position	Shift+A-Z
3.	Zoom In	+
4.	Zoom Out	-
5.	Find Report	Ctrl+F
6.	Hardware Settings	Ctrl+H
7.	Search Next Pattern	Ctrl+N
8.	Print Waveform	Ctrl+P
9.	Search Pattern	Ctrl+S
10.	Trigger Settings	Ctrl+T
11.	Threshold Settings	Ctrl+V
12.	Undo	Alt+BackSpace
13.	Delete Labels	Delete
14.	Stop Acquisition	Escape
15.	Find Next Report	F3
16.	Run	Enter
17.	Repetitive Run	Ctrl+Enter
18.	System Environments	Alt+Enter
19.	Frequency, Timing or Sample Clocks Switch	Space
20.	Zoom In/Zoom Out	Mouse Wheel (Waveform Window)
21.	Moves data up or down	Mouse Wheel (Report Window)
22.	Move labels up or down	Mouse Wheel (Label Field)
23.	Measure Waveforms	Ctrl+Drag Mouse (Waveform Window)
24.	Drag Waveforms	Drag the Mouse (Waveform Window)
25.	Measure and Zoom Waveforms	Right-drag the Mouse (Waveform Window)

## **Data Storage**

There are three ways to store the captured data: 1.Conventional, 2.Transitional and 3.Qualified.

### **Conventional Storage**

This is the most common way to store the captured data, 1 bit by bit, and the logic analyzer will stop when its memory buffer is full.

### **Transitional Storage**

The logic analyzer will only store the transitional data (rising or falling) and record the time duration of the non-transitional data which is also called Timestamp. Only the TravelLogic series supports the transitional storage.

#### Features

#### **Long Duration**

The logic analyzer only record the transitional data, so the recorded time can be long duration as long as the data is not in transition.

#### 32 Channels available

32 channels are available for the transitional storage. 8 channels and 32 channels of transitional storage are available for the series of TL2x36, but the series of TL2x18 only support 8 channels of transitional storage.

#### Captured data will not be lost even interrupted

The captured data will not be lost even when the logic analyzer is stopped when capturing data.

#### Display the used memory buffer

The LA Viewer will display the percentage of the memory buffer is being used.

#### How to use the Transitional Storage

Click Hardware Settings ( S/R: 100 MHz ) on Toolbar (or Device menu) to show the

Hardware Settings dialog box below.

ardware Model The instru TL22368+		you are using is shown red in Sample Rate Ext. Clock Cha				
Mode	Min. S/R	Max. S/R	Available ch.	Min. Mem.	Max	
- 🔄 200M	1Hz	200MHz	Adjustable	256	Adju	
-🔳 Transitional Storage-32	200MHz	200MHz	32	Auto	Aut	
─	200MHz	200MHz	8	Auto	Auto	
—≝ 200M-36	1Hz	200MHz	36	256	2M	
—≝ 200M-18	1Hz	200MHz	18	256	4M	
- <u>≡</u> 200M-12	1Hz	200MHz	12	256	6M	
—≝ 200M-9	1Hz	200MHz	9	256	8M	
—≝ 200M-6	1Hz	200MHz	6	256	12M	
- <u>≡</u> 200M-4	1Hz	200MHz	4	256	18М-	
—≝ 200M-2	1Hz	200MHz	2	256	36M	
└≝ 200M-1	1Hz	200MHz	1	256	72№

+ 🧰 CAN Trigger	1Hz	200MHz	Adjustable	256	Adju	
+ 🧰 I2C Trigger	1Hz	200MHz	Adjustable	256	Adju	
+ 📮 I25 Trigger	1Hz	200MHz	Adjustable	256	Adju	
•						
Ext, Clock(Hz) Memory Depth(bits/c	h) Recordable Ti	ime Post-Trigg	er Size			
			51 5120	_		
20000000		> 50 %	<b>–</b>		OK	

#### Quick tips:

If there many transitions in the captured data, then do NOT use the Transitional Storage.

The maximum memory buffer will be set as default, not available for change. Also, only the transitional data of the channels on the LA Viewer window can be stored.

The LA Viewer will set the trigger position in percentage, which means the data after the

trigger position as a percentile of the total captured data. The trigger cursor can't be input

(moved) on the waveform window as the conventional storage.

The Pre-Trigger is not available for the Transitional Storage.

#### **Qualified Storage**

The Qualified Storage is only available for the Transitional Storage. It works as a filter to store data (in read or write status) in the Transitional Storage to further expand the efficiency of the memory buffer. The Qualified Storage is only available for the TravelLogic series.

#### Features

#### Save/Don't Save qualified data

You may set conditions to save or not to save the qualified data.

Available for multi channels or the bus decodes.

#### **Multi-conditions**

Conditions can be 1, 0, rising, falling, or transition.

#### **Continuous time**

The time of the waveform of the qualified storage is continuous.

#### **Qualified Storage Settings**

Qualified Storag	e Settin	gs	×
🔲 Disable Qualified storage

### **Ext. Clock Channel**

Select External-36 where "-36" means 36 channels and select channels from Ext. Clock

Channel on the upper-right corner of this dialog box.

CH35: ONLY the last channel (CH35) can be set as the external clock channel for the

selected External-36.

**!CH35:** Invert the waveform of CH35.

**CH34 & CH35:** Both CH34 and CH35 together serve as the clock qualifier to qualify what data should be acquired.

**CH34** | **CH35**: Either CH34 or CH35 serves as the clock qualifier to qualify what data should be acquired.

Ext. Clock(Hz): Set the external clock speed (1000000 Hz e.g.) on the lower-left corner

of this dialog box.

# **Chapter 3 Functionality**

## File

## **Open Waveform File**

Load a waveform file (\*.law). Waveform files can also be opened when dragged to the

waveform field

## Save Waveform

Save	Waveform		×
File Form	at		
	Select a file format		
1	LAW 3.0 Wave File	<b>~</b>	
File Name	Enter a file name or browse	Browse	
wavero	m Range Select the range of the wave	form to be saved	
	From Buffer Head	Save Channel	
	То	All Channel	
	Buffer Tail	C Selected Channel	
		OK Cano	:el

Format: You can save the acquired data in four different formats:

Format		Туре
*.law to be used by the LA Viewer.	a.	LAW 3.0 Wave File.
*.pgw to be used by the PG Editor for the Acute digital pattern generator.	a.	PGW 1.0 Wave File
	a.	Transitional Text File (.txt)
		Normal Compression.
*.txt to be saved as a text file.	b.	Text File (.txt)
*.txt to be saved as a text me.		No Compression.
	c.	Include File Header: save the parameter in
		the file header.
*.VCD to be saved as a Value Change Dump file.	a.	.VCD File (.VCD)

File Name: Enter an exclusive file name or press Browse.

**Range:** Select the range of the waveforms to be saved.

**Channel:** Channels to be saved.

### **Manage Project**

Manage Pro	ject	×
Project List	Project may save some current se	
	Please right-dick to load, rename,	, delete

Default		
Add Project		
Ë,	To save current settings as a proj enter a project name in the edit b click Add button	
		Add
	[	Close

#### **Project List**

The project list displays current projects that contain label names, trigger parameters and

threshold settings etc. Right-click the project name to show the menu below.

Load: Load a project from the Project List.

**Delete:** Delete a project in the Project List.

**Rename:** Rename a project in the Project List.

**Properties:** Show the contents of a project.

Add Project: Create a new project.

## Load Last Project

The LA Viewer, when exited, will automatically save the current working environments as a

project file. You can load this project file next time when start the LA Viewer.

### **Print Waveform**

Print Way	veform X
Printer D	evice
9	IBM InfoPrint 40 PS     IBM InfoPrint 40 PS

	Buffer Tail
	,
	Print. Cancel

**Printer Device:** Select a printer in Printer Device.

**Fit one paper** ( ): The height and width of the selected waveforms will be printed as those of a page.

Horizontal ( 🚔 ): The width of the selected waveforms will be printed as that of a page.

**Vertical** ( **1**:): The height of the selected waveforms will be printed as that of a page.

**Custom Size** ( 2 ): The selected waveforms will be printed in the customized height and width.

Grid Size: Grid size is adjustable, but not available for printing the state data.

Color (Gray scale): Print the selected waveforms in their original (gray) colors for color

(non-color) printers; the background is always white color for all printers.

Omit Ch. width setting: This function is only available for printing the State data and will

cut the length of label names to the same as that of the State data in order to print as many

data in one page.

**Range: From** Start point of the range **To** End point of the range.

Channel: Print the selected channels.

### Import

(only available in TL2236B+)

Translate the digital or analog text file into .law format from the other device.

🗖 Import Text/CSV File 🛛 🗙
File Format
Select a file
Digital Data - Agilent LA Module CSV text file (*.csv) Digital Data - Tektronix TLA Data Exchange Format (*.t Digital Data - LA Text File (*.txt)
Analog Data - DSO Text File (*.bxt   *.csv) Digital Data - Other Text File (*.bxt)
Select File
Enter a file name or
<b>•</b>
Browse
??? Cancel

Agilent LA Moduled CSV text file: The file export from Module CSV text file.

Tektronix TLA Data Exchange Format: The file must save as the TLA Data Exchange

Format.

LA Text File: The first column will be the label name.

Text format file import settings							
Separate By	Result Preview						
Comma	1 Acute Technology Inc. PG-Editor						
C Space							
C Tab							
C Semicolon							
O Other : ,							
Sampling Interval Setting:	S Data start from row 1						
Refering to column :							
O Sampling Rate = 200	0 MHz						
	Previous Execute Cancel						

#### **DSO Text File:**

Support import multi files and setting individually. LA software will check over the sample

rate/sample interval and trigger position of the first ten column

The unit value setting: If the unit is mV, 1357 will express as 1.357V. If the unit is uV,

135790 will express as 0.13579V.

When import differential signal, the settings between the two channels must be the same settings.

## Label

### Add A Signal

Click Add A Signal to show the dialog box below.

Add A Signa	ป	×
Label Name		
/	Enter a label name	with 31 characters or less
Parameter		
она ли	Set the channel nur	mber, color and type
	Number	Color
	СН 0 💌	White 💌
	Invert	
		OK Cancel

Label Name: Enter the label name with no more than 31 characters. (Chinese word

expresses two characters.)

**Channel Number:** Set the channel number.

**Color:** Set the waveform color.

**Invert:** Invert the waveforms.

### **Group(Bus)**

Click on Add Group (Bus) to show the Add group (bus) dialog below.

Add G	iroup(Bus) 🛛 🗙
Label Nam	e
<b>/</b>	Enter a label name
Ĩ	Bus 1
Channels	
сна 💶	C Quick Setup
CHS TU CHS TU	End (MSB#) 7 🔹 Start (LSB#) 0 🔹
	8 + BitO(LSB) CHO
Parameter	Select the waveform color and value type
e carr	Color Value Type
~	White VHEX
	Gray Code
	C Convert to Gray Code
	C Convert to Binary Code
	OK Cancel

Label Name: Enter the label name for the group (bus) with no more than 31 characters.

(Chinese word expresses two characters.)

Auto Increment: Set group channels between Start and End channels on numeric order.

#### **User Defined**

*#* of Channels: Set the group (bus) channels in the dialog box below.

#### **Group Channel List:**

Group Channe	List
Bit0(LSB)	СНО 🔽
Bit0(LSB)	CH0
Bit1	CH1
Bit2	CH2
Bit3	CH3
Bit4	CH4
Bit5	CH5
Bit6	CH6
Bit7(MSB)	CH7

Set each channel as Add A Signal.

**Color:** Set the waveform color.

Value Type: Set the value type in HEX (hexadecimal), DEC (decimal), OCT (Octal), BIN

(Binary), ASC (ASCII), Analog (2's comp. (complement)), Value (2's comp. (complement)).

**Invert:** Invert the waveforms.

Gray Code: Show the waveforms in Gray code.

#### **Bus Decode**

Click on Add Bus Decode to show the dialog box below.

Add Bus D	ecode X
Bus Name	
/모	Enter a label name with 31 characters or less
	PBus1
Color	
	Select the waveform color
Parameter	
	Select a decode type and click the Advance button to set more parameters
ĕ₩	PMBus Advance
	Display the waveforms with decode
	OK Cancel

Bus Name: Enter the label name with no more than 31 characters. (Chinese word expresses

two characters.)

**Color:** Set the waveform color.

Display the waveforms with decode: Display the waveforms with its decode together.

		Idle	49	6E	20
SPI bus	1 CS				
5P1 Dus	2 SDA				
	0 SCK				

Advance: Set the decode parameters or press OK to use default settings.

## Label Settings

Label S	Settings 🔀
Label Name	
<mark>∕</mark> ■	Enter a label name CH-00
Channel —	
CHS TT	Set the channel number, value type and color
CH8 11	Channel Number Value Type
	Color White 💌
Waveform -	
	Invert     Gray Code     Gray Code     C Convert to Gray Code     C Convert to Binary Code
	Display the waveforms with decode
	LA Advance
	OK Cancel

**Label Name:** Enter the label name with no more than 31 characters. (Chinese word expresses two characters.)

Channel Number: Set the channel number.

Value Type: Set the value type in HEX (hexadecimal), DEC (decimal), OCT (Octal), BIN

(Binary), ASC (ASCII), Analog (2's comp. (complement)), Value (2'comp (complement)).

Color: Set the waveform color.

**Invert:** Invert the waveforms.

Gray Code: Show the waveforms in Gray code.

Display the waveforms with decode: Display the waveforms with its decode together.

Advance: Set the decode parameters or press OK to use default settings.

## Add All Labels

Create all new channels. The "Delete the current labels?" dialog box will show, if click yes,

the exiting labels will be deleted.

Add All Labels						
Delete the current labels?						
Yes No	Cancel					

### **Delete All Labels**

Delete all labels.

#### **Import Labels**

You may edit the label names in a .CSV file and import the file into the LA Viewer.

Ex1: edit in an Excel file

Bus	07							
data	3							
NAND	9,10,11,1	9,10,11,12,13,14,15,16,19,20,18,21,24,23						
Bus2	1	3	5	7	9			

Ex2: edit by an editor

Bus,0..7

data,3

NAND, "9, 10, 11, 12, 13, 14, 15, 16, 19, 20, 18, 21, 24, 23"

Bus2,1,3,5,7,9

Result:

_	
Bus	07
data	3
NAND	9,10,11,12,13,14,15,16,19,20,18,21,24,23
Bus2	1,3,5,7,9

The first column is the Label name, which can be in English characters or with alphabetic numbers; the second column is the Channel number which can be "0..7" to represent a bus form channel 0 to channel 7 or in a number "2" to represent the channel 2.

## Waveform

## Zoom ALL

Display all waveforms in the Waveform Window.

### Zoom 1:1

One sample is shown as one point on the Waveform Window.

## Zoom In

Zoom in the waveforms centered on the mouse cursor.

### Zoom Out

Zoom out the waveforms centered on the mouse cursor.

### Find Trigger Marker (T)

Display the trigger cursor as the center of the Waveform Window. Click Find Trigger Marker

or press T.

### Find Cursor A, B, C, D, E

Display cursor A-E as the center of the Waveform Window. Click Find Cursor A~E or press

A-E.

### Generate a Bitmap File

Save the waveforms in format like PNG, JPG, GIF, BMP, or TIFF.

## **Copy to clipboard**

Copy the waveforms to the clipboard.

### **Invert Waveform**

Invert the waveform. Click the Invert Waveform button (

### **Search Pattern**

The LA Viewer can search two kinds of acquired data: 1. Pattern, 2. Decode. Click the

Search Pattern button ( ) to search the acquired data in the same pattern or decode.

Search Pattern	×
Pattern Decode Glitch	,
Select a label and value type and clic CH-00	
Pattern	
Label Name	Channel Value
CH-00	0 î
, Load Trigger Settings	Clear Pattern Settings
	Pass Count
From Buffer Head 💌	0 +
To Buffer Tail 💌	Search Cancel

#### Pattern

**Add:** Select a label (or group) and its value 0, 1,  $\uparrow$  or  $\downarrow$  (Hex).

Load Trigger Settings: Load the trigger settings.

Clear Pattern Settings: Clear all pattern settings.

Range: The range within the acquired data you want to search for the same pattern.

Pass Count: Pass Count will pass N times that triggers occurred.

**Result:** Click Search to run Search Pattern and the LA Viewer will show the number of

matches on the Status field below or "Cannot find the specified waveform!" if no matches;

Cursor B will show on the first matched data

Time/Div:	3.7🤑	В			
Acquired:		-4.3	82 us	-4.376 us	-4.369 us
CH-00	0		3.125n	3.125n	3.125n

### **Search Previous / Next Pattern**

Click the Search Previous / Next Pattern button ( / ) to search the previous / next

matched pattern starting from Cursor B. The Pass Count function is not available in Search

Next

#### Go to Report Window

### **Compare Waveforms**

Click Compare Waveforms in the Waveform menu or push F8, you will see the Compare Waveforms dialog box as below.

Сотраге Жач	veforms		×				
Default	Temp. 1	Temp. 3	Temp. 5				
Reference	Temp. 2	Temp. 4	Temp. 6				
<ul> <li>Quick tips:</li> <li>1. Default stores the waveform being shown on the Waveform Window by default.</li> <li>2. Reference stores the waveform to be compared to.</li> <li>3. All waveforms above can be moved.</li> <li>4. Drag both Default and Reference waveforms together by holding down the Shift key.</li> <li>5. Drag the Reference waveform only by holding down the Ctrl key.</li> </ul>							
		Compare	Cancel				

**Default** – it stores the waveforms on the Waveform Window by default.

**Reference** – it stores the waveforms to be compared to.

**Temp. 1 ~ Temp. 6** store another 6 temporary reference waveforms.

All 8 waveforms can be moved.

Compare Wa	veforms		×					
Default	Temp. 1	Temp. 3	Temp. 5					
Reference	Temp. 2	Temp. 4	Temp. 6					
<ul> <li>Quick tips:</li> <li>1. Default stores the waveform being shown on the Waveform Window by default.</li> <li>2. Reference stores the waveform to be compared to.</li> <li>3. All waveforms above can be moved.</li> <li>4. Drag both Default and Reference waveforms together by holding down the Shift key.</li> <li>5. Drag the Reference waveform only by holding down the Ctrl key.</li> </ul>								
		Compare	Cancel					

Click Compare to see the Default waveforms (in white color) and the Reference waveforms

(in red co	olor) bel	ow.						
Ch-02	2		<b>45n</b> 45n	195n 195n	42.5n 42.5n	<b>107.5</b> n 107.	5n 65n 6982.5	n 42.5n
Label	Channel							

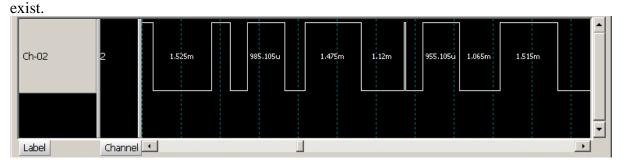

There are three ways to compare these two waveforms:

Drag the Default waveforms only - drag the white waveforms.

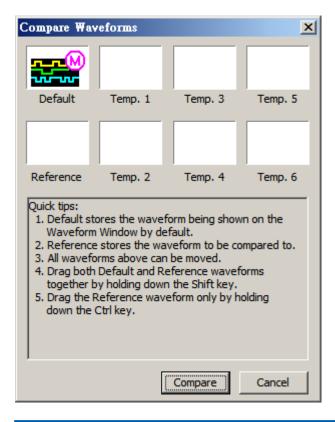

Drag the Reference waveforms - hold down the Ctrl key and drag the red waveforms.

Drag the two waveforms together - hold down the Shift key and drag the two waveforms.

F9 is the hotkey to compare two waveforms if the Default and Reference waveforms already

You can also compare two waveform files (Test1.law and Test2.law e.g.). Open the first

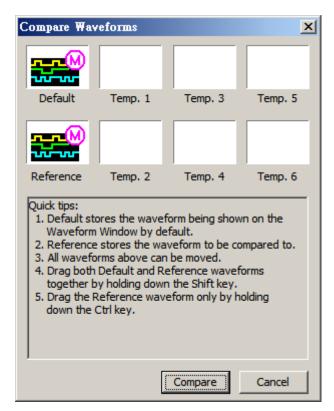

waveform file (Test1.law) as below.

Then push F8 to show the Compare Waveforms dialog box below with the Test1 file as the

Default waveform.

Drag the Default waveforms to the Reference below.

Then click Compare to return to the LA Viewer window and open the second waveform file

(Test2.law), you will see the Test1 as the Reference waveforms and the Test2 file as the

Default waveforms.

There are three ways to compare the two waveforms:

Drag the Default waveforms: drag the white waveforms.

Drag the Reference waveforms: hold down the Ctrl key and drag the red waveforms.

Drag the two waveforms together: hold down the Shift key and drag the two

waveforms.

#### Bus Decode shows a bus decode in the Waveform Window and the Report Window.

#### Save report to file

Save the report as a .CSV or text file, it can choose "No Sample/Timestamp" when save

as .CSV file.

#### Waveform/Report Tracking

Dragging the waveform, the Report Window will automatically follow the movement, so that

Waveform Window and Report Window can be displayed simultaneously.

## Device

### Run

Acquire data and fill the memory buffer when the trigger occurs and stop when the memory buffer is full. The running status icon (56) on the upper-right corner of the software window will flash while some toolbar buttons are disabled (in gray color) during the data acquisition.

## **Repetitive Run**

Acquire data continuously and only stop when you press the Stop Run button.

## **Quick Repetitive Run**

Acquire data continuously and save to "work directory" until press the Stop Run button.

### **Stop Run**

Stop acquiring data.

## Hardware Settings

## Field Description

Field Name	Description
Field Name         Mode	<ul> <li>Description</li> <li>Each mode represents an independent firmware.</li> <li>a. Min. S/R	(synchronize). Minimum sampling rate.
Max. S/R	
	Maximum sampling rate.
Available ch.	Select the number of channels to be used.
Min. Mem.	Minimum memory depth.
Max. Mem.	Maximum memory depth.

#### Ext. Clock(Hz)

Enter the timing for the external clock when it is used as the sampling rate.

#### Custom Memory Depths(bits/ch)

Customize the memory depth per channel manually.

#### **Recordable Time**

The LA Viewer will calculate and display the time to record the captured data based on the

sampling rate and custom memory depth.

## **Trigger Settings**

Trigger is to use the logic analyzer's electronic circuits to capture the data that matches the pre-set criteria.

#### **Trigger Mode:**

#### **Pre-Trigger**

Click Pre-Trigger to record the acquired data in the memory buffer between its beginning and the trigger position until full even when triggers occurred in between.

#### **Post-Trigger**

Click Post-Trigger to record the acquired data in the memory buffer between its beginning and the trigger position until full and then stop.

#### **Delay-Trigger**

Delay the trigger N nanoseconds (ns) after the trigger position.

#### **Pass Count**

Pass count will pass N times that triggers occurred.

#### **Common Trigger Settings:**

#### Select trigger

Click Trigger Settings on Toolbar or Device menu

Pattern (P1/P2/P3/P4/P5/P6/P7/P8/P9/P10/P11/P12/P13/P14/P15/P16) Sample Clock						

### **Sequence Trigger Settings**

The Sequence Trigger has 16 levels and the last level is the trigger; the Pre-Trigger and Pass Count settings are the same for all levels. For example, a 12-levels sequence trigger is set as the dialog box below: Next (P1, P3 ... P5, P10 and P11) means continuous trigger condition, Then If (P2, P6,..., P9) means discontinuous trigger condition and Then Trigger (P12) means trigger.

Sequence Trigg	er Settings			×	
IF P1 Next	P2 ThenIf	P3 Next	P4 Next	•	
P5 Next	▼ P6 ThenIf	▼ P7 Next	P8 ThenIf	•	
P9 Next	▼ P10 Next	▼ P11 ThenIf	P12 Then Trigger	•

Sequence by	💽 🖲 Channel (	CH-00		cel	
Pattern (P1 XP2)(P3 XP4 XP5 XP6)(P7 XP8)(P9 XP10)XP11)(P12) Sample Clock					

### Sequence by the selected channel

You may set the sequence trigger condition on your selected channel only to avoid trigger

conditions in wanted channels.

For instance, you can set rising signal as the trigger condition only in the Clock channel and

ignore the rising signals in another 4 data channels.

Sequence by		
Custom Rising 📃 💌	🌔 Channel 🔘 Label	CLK 🗨

# Alternative Sequence Trigger

This feature is only available in TravelLogic Series. Alternative Sequence Trigger Settings dialog box below.

Alternative Sequence Trigger Settings

OR IF DI Next	D2 Next	D3 Next	D4 Then Trigger 💌					
Pre-Trigger Pass Count: 0 + Load Save Clear All OK Cancel								
Pattern (A1)(A2)(A3)(A4) (C1)(C2)(C3)(C4) Sample Clock								

### **Comparison Trigger**

This feature is only available in TravelLogic Series and only available at or under 200Mz, so you must select the 200M-36 mode in the Hardware Settings dialog box below. The comparison trigger is designed to compare group bus but not for the bus decode.

### **Trigger Setting**

Comparison Trigger Settings dialog box below.

Comparison Trigger Settings					
Label CH-00	Value1: Value2:				
Chip Select Channel	Pattern == Value1 or Pattern == Value2				
CH-00 Sigh C Low	C Pattern != Value 1 and Pattern != Value 2				
	C Pattern > Value1 C Pattern >= Value1				
Latch Channel	C Pattern < Value 1 C Pattern <= Value 1				
CH-00	Pattern >= Value1 and Pattern <= Value2				
	O Pattern < Value 1 or Pattern > Value 2				
Pre-Trigger Pass Count: 0	Load Save OK Cancel				

### Label

Select a label with two values (Value1, Value2) for comparison.

### Value1, Value2

The values can be up to 32 bits. Input can be in binary, decimal, hex code or don't care.

### **Comparison conditions**

The instrument will trigger when one (only) of the conditions below is matched.

"Pattern == Value1 or Pattern == Value2",

"Pattern != Value1 and Pattern != Value2",

"Pattern > Value1",

"Pattern >= Value1",

"Pattern < Value1",

"Pattern <= Value1",

"Pattern >= Value1 and Pattern <= Value2" (Value2 must > Value1),

"Pattern < Value1 or Pattern > Value2" (Value2 must > Value1).

# **Chip Select Channel**

The instrument will trigger only when WR is high.

### Latch Channel

The instrument will trigger only when CS is rising.

# Width Trigger

Only the TravelLogic series and the LA2164P support the width trigger. Settings dialog box

below.

# LA2164P:

S	ingle Level Trigger S	Settings		×
	Channel Label			
	Label Name	Channel	Value	
	СН-00	0	х	
	СН-01	1	х	
	CH-02	2	х	
	СН-03	3	х	
	CH-04	4	х	
	CH-05	5	х	
	CH-06	6	х	
	CH-07	7	х	
	СН-08	8	х	
	CH-09	9	х

	Pass Count:	0 -
Load	Save Clear OK	Cancel

### **Pulse Width Trigger**

Pulse Width condition can be set as > (or <) N nanoseconds (ns). For example, set the Clock Pulse Value at 1 (high) and Pulse Width Trigger > 50 ns, the instrument will trigger when the clock pulse is High and its pulse width > 50 ns.

Samples = pulse width/sampling rate.

# **Timeout Trigger**

Only the TravelLogic support the Timeout trigger in the dialog box below.

Timeo	ut Trigger Settings 💦 🗙
Label	CH-00
Match	0
Unit	Clock     C Time
Value1	0 clocks
	W >= Valuel →
	Pass Count: 0
Load	Save Clear OK Cancel

### **Timeout Trigger**

Trigger when clock/time holds and out of the time value.

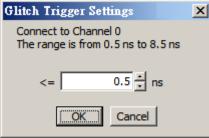

### **Glitch Trigger**

The feature glitch trigger is only available for the TravelLogic Settings dialog box below.

Mode	Min. S/R	Max. S/R	Available ch.	Min. Mem.	Max. Mem.

Cancel						

### **Trigger Setting**

Select PicoVu 4G Glitch. The Glitch Trigger Settings dialog box below.

ONLY Channel 0 (default) can be the glitch trigger channel. Parameter range:  $0.5 \sim 8.25$ 

nanosecond (ns) with a 0.25 ns interval.

Click OK to trigger the glitch and the result will show on the Waveform Window below.

Result

### **External Trigger**

Only the TravelLogic and the PkLA1616+ support the External Trigger.

The settings dialog box below.

External Trigger Settings							
	Trigger by						
	Rising Edge     C Falling Edge						
	Pre-Trigger Pass Count: 0						
	Load Save Clear OK Cancel						

The TravelLogic series support all four trigger conditions: Rising Edge, Falling Edge,

Pre-Trigger and Pass Count; the PkLA1616+ only supports Rising Edge.

### **Trigger connection**

Connect the MCX cable to the trigger in (Trig-In) port of the logic analyzer.

### **Delay Trigger**

The Delay trigger is only available for the LA2164P.

### **Trigger Setting**

Click Single level to show the Single Level Trigger Settings dialog box below.

### Schmitt Circuit

When the target signal transits slowly and bounces, then the logic analyzer might see many

noises as the diagram below. The Schmitt circuit offers two thresholds to prevent such noises.

### Method:

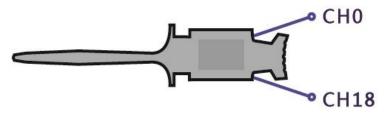

Only available for TravelLogic and sample rates at or below 200 MHz.

Two thresholds: Threshold-High and Threshold-Low are represented by group 1 (Channel

0-17) and group 2 (Channel 18-35).

Threshold setting rules

Channel 0 and Channel 18 are a pair, Channel 1 and Channel 19 are a pair, ...

Group 1 (Channel 0-17) can be Threshold-High or Threshold-Low.

When the target signal is rising, it must pass over the Threshold-High to turn to logic 1 from logic 0; when the target signal is falling, it must pass over the Threshold-Low to turn to logic 0 from logic 1.

Thres-high	$\sim$

Reset	All On	Fil	ter less than 10ns	; pulse	OK Cancel

Result

Click OK to run the LA Viewer and see CH00 (no glitch) and CH01 (glitches).

### Example 2Filter glitches caused by crosstalk.

### Hardware

Signal source: Crosstalk between circuit lines of a target system.

DSO: Acute DS-1302

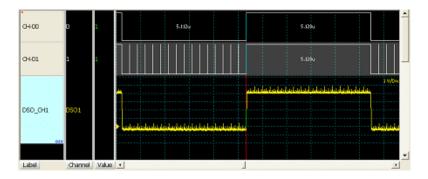

LA: Acute TL2236B

### Software

Measure CH 0 with a 10ns-pulse filter and CH 1 without filter.

### Result

Click OK to run the LA Viewer and see CH00 (no glitch) and CH01 (multiple glitches).

# Stack with the DSO

DSO brand	Software
Acute	Any Acute software CD-R (DSO software).
Tektronix	Please download the <b>TEKVISA CONNECTIVITY SOFTWARE</b> from the Tektronix website.
Agilent Keysight	Please download the <b>KEYSIGHT IO LIBRARIES SUITE</b> from the Keysight website.
GW Instek	Please download the Windows USB Drives form the GW Instek website.
LeCroy	Please download the <b>NI-VISA</b> and <b>Drivers</b> from the NI website.
HAMEG	Please download the <b>NI-VISA</b> and <b>Drivers</b> from the NI website.
R & S	Please download the <b>NI-VISA</b> and <b>Drivers</b> from the NI website.

The software to stack DSOs of different brands is different:

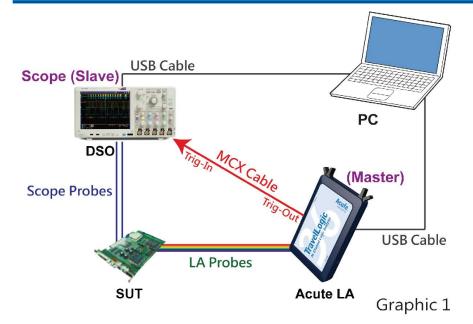

DSOs that can be stacked:

DSO brand	Model	USB	TCP/IP
Acute	• DS-1000/TravelScope	V	
Tektronix	<ul> <li>TDS1000B/1000C/2000B/3000/3000B/3000C/ 5000B/7000</li> <li>DPO2000/3000/4000/4000B/5000/7000 7000C/70000/70000B</li> <li>DSA70000/70000B</li> <li>MSO2000/3000/4000/4000B/5000</li> <li>MSO2000/3000/4000/4000B/5000</li> <li>MDO4000</li> <li>TPS2000/2000B</li> </ul>		v

R & S	• RTO1000 series		V

### The stack diagram:

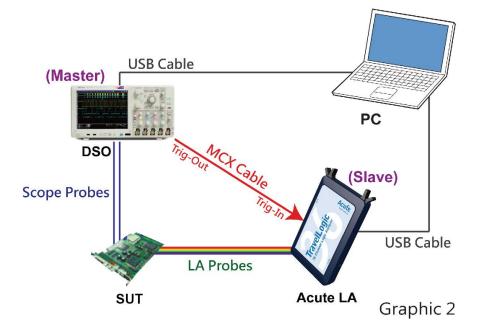

The logic analyzer is the Master and the DSO is the Slave (Diagram 1).

Connect the logic analyzer (Trig-Out) with the DSO (Trig-In or Ch4 for Tektronix MDO4000 serial) over a MCX-BNC able for the Tektronix/Agilent/GW Instek DSO (MCX-MCX cable for Acute DSO); connect the DSO with the PC over an USB or Ethernet cable.

The DSO is the Master and the logic analyzer is the Slave (Diagram 2).

Connect the DSO (Trig-Out) with the logic analyzer (Trig-In) over a MCX-BNC cable for the Tektronix/Agilent/GW Instek DSO (MCX-MCX cable for Acute DSO); connect the DSO with the PC over an USB or Ethernet cable.

Click DSO stack settings on the Device menu and see the dialog box below.

	DSO Stack Settings

	Record Length:	1M 💌			
Tes	t Connection	OK Cancel			

### Select the DSO Brand

HAMEG, Tektronix, Agilent, Acute, LeCroy, Instek or Emulation (no DSO stacked).

### **Connection Type**

USB, TCP/IP, Auto. If the DSO model is the Tektronix TDS5000B or DPO7000, use its

built-in Windows OS to run the VXI-11 Server, then install the LA Viewer in the DSO and

select Auto to stack.

### **Connect IP**

Enter the IP address if the connection type is TCP/IP. If the stack cable is the Ethernet

crossover cable, please set the IP addresses for the logic analyzer (192.168.1.1) and the DSO

(192.168.1.2).

### System/Horizontal Parameters

### Settings by DSO

It's for the DS1000/TravelScope to the master device.

### Connection

Display the DSO model.

# Sampling Type

Sampling Type can only be adjusted by but the Tektronix/Agilent /GwInstek/LeCroy DSO:

# Maximum

The maximum sampling rate of the DSO.

# Manual

Set the sample rate manually, only available for the Tektronix/Agilent /GwInstek/LeCroy.

# LAX1

The ratio of the sample rate of the DSO and the logic analyzer is 1:1.

# LA X 10

The ratio of the sample rate of the DSO and the logic analyzer is 10:1.

# Edit

Set the sample rate of the DSO manually.

The sample rate of the DSO should be set as 10 times of that of the logic analyzer

# (highly recommended).

# Sampling Rate

Only available when the Sampling Type is "Edit".

# Trigger Pos. Type

# Default

The trigger position of the logic analyzer is the same position set manually for the Tektronix

or Agilent DSO and is in the middle by default for the Acute DSO.

# Smart(Auto)

Set the trigger position of the DSO automatically. It is only available for Tektronix

DPO7000/7000C.

# Manual

Set the trigger position of the DSO manually.

# **Trigger Position**

### Set the DSO trigger position.1

The memory depth of the stacked Tektronix or Agilent DSO is set manually; if the memory depth is set as 10Kb, then only 10Kb data will be shown in the LA Viewer.

### Stack Delay

There will be time delay between the logic analyzer and the DSO due to stack; so, you can compensate the delay by entering the delay time between the two stacked instruments. There is time delay between the stacked DSO and logic analyzer; you can fix the delay by pressing the Shift key and dragging the DSO waveform on the Waveform Window. Click OK after all settings.

Click Add Bus Decode in the Label menu or right-click on the label field to show the dialog below.

HAMEG DSO can set Stack Delay only.

# **Record Length**

It's for TravelScope to select the record length.

Add Bus D	ecode		
Bus Name			
/	Enter a label name with 31 characters or less		
	DSO		
Color			
сна лг	Select the waveform color		
	White 💌		
Parameter			
ow	Select a decode type and click the Advance button to set more parameters		
<u> </u>	DSO  Advance		
	Display the waveforms with decode		
	OK Cancel		

Set more parameters like Bus Name (DSO), Color (White), Parameter (DSO), and check

Display the waveforms with decode, then click Advance to show the DSO Stack Settings

dialog below.

DSO Stack S	Settings	×	
Channel Num	ber		
/ 	Select the number of DSO channels; the number is subject to the DSO model		
		CH1 💌	
Parameter -			
	Channel parameter settings. The x1/x10 probe setting is only available for the Acute DSO and must be consistent with the probe switch		
	Volt/Div:	10V/Div V	
	• x1Probe	C x10 Probe	
	AC Coupling	20MHz Bandwidth limit	
		OK Cancel	

User can also click "Create Bus (Signal) Wizard" to add many DSO channels at one time.

### **DSO Stack Settings**

### Channel

Select the number of the DSO channels.

### Parameter

### Volt/Div

Set the threshold voltages according to the working voltages of the target system. If the range

of the measuring voltage is 1V, then set the amplitude of each grid as 1V. 1V/Div means one

grid is 1V, and 2V/Div means one grid is 2V.

### x1 Probe/x10 Probe

Only available for the Acute DSO.

### **AC Coupling**

If checked, the coupling is AC or the default is DC.

### 20MHz Bandwidth limit

If checked, the 20MHz filter is enabled for the DSO.

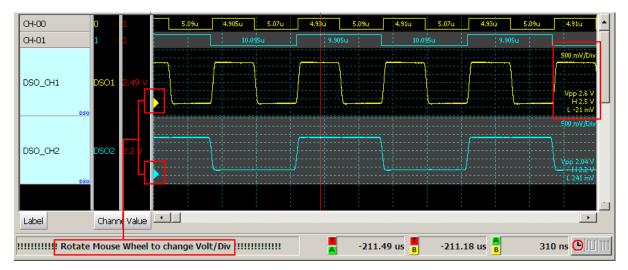

Connect CH1 and CH2 of the DSO with CH-00 and CH-01 of the logic analyzer respectively.

Move the mouse cursor on the left edge of the Waveform Window to adjust the waveform height; move the mouse wheel on the right edge of the Waveform Window to adjust the voltage per division (V/Div).

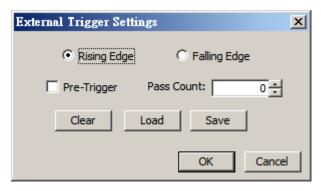

### **Display the voltage**

Put the cursor on the left side of the waveform and left-click to drag the voltage amplitude vertically. This will display the VPP, Vhigh, and Vlow on the right side of the waveform. The following figure is an example of 1MHz, 8 bits counter measured by the logic analyzer stacked with the DSO.

### Set the DSO as the Master and the logic analyzer as the Slave.

In order to set the DSO as the Master, you also need to set the rising edge/falling edge as the trigger condition in the External Trigger dialog window below. Click the Hardware Setting to find the External Trigger dialog.

### How to stack with the Tektronix TDS5000B/DPO7000(Windows-based)

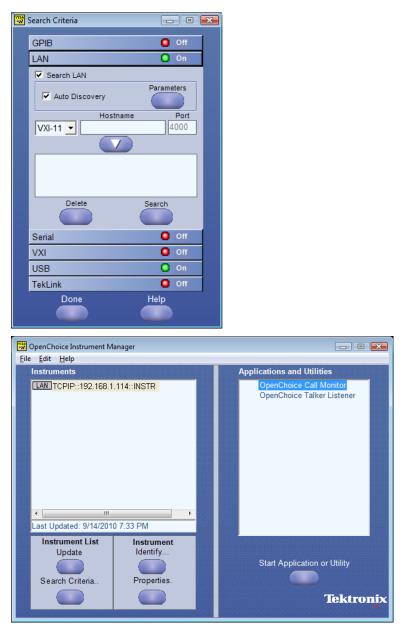

Set the VXI-11 Server control on the right-bottom of the Windows as Start VXI-11 Server.

Use the crossover cable (Ethernet) to connect the logic analyzer (recommended).

Open the TekVisa Resource manager\ Instrument manager to find the instrument list to show

HAMEG Software Installation:

Please download NI-VISA 5.4 software from NATIONAL INSTRUMENTS and install it.

Please install USB driver if you select USB interface. Device Manager will show the

following result when you install it completely.

Because of connection HAMEG HMO3000 series DSO with PC by virtual COM port, we

click HAMEG HO730 USB with right button of mouse and select Content=>Advanced to

check the Load VCP.

Configuration	-
Use these settings to override normal device behaviour.	
Load VCP	

# Virtual Waveform Generator

The Virtual Waveform Generator ( ) can create a virtual waveform when (and must) there

is no logic analyzer connected to your PC (Demo mode).

Virtual Waveform Generator				
Channel:	Item:	Frequency	:	
CH0 - CH7	Up Counter 💌	20	MHz	
CH8 - CH15	Random data 💌	19	MHz	
CH16 - CH23	Down Counter 💌	18	MHz	
CH24 - CH31	Random data 💌	17	MHz	
CH32 - CH39	Random data 💌	16	MHz	
CH40 - CH47	Down Counter 💌	15	MHz	
CH48 - CH55	Random data 💌	14	MHz	
CH56 - CH63	Up Counter 💌	13	MHz	
	OK C	Cancel D	efault	

# Tools

# Fonts

Set font type and size for the Label field, Channel field, Value field, Status field, Waveform

Window, Report Window, or State Window in the dialog box below.

# **System Environments**

Customize the working environments in the System Environments dialog box below.

# Language

The LA Viewer supports English, Traditional Chinese and Simplified Chinese.

### Work Directory

Set the file directory.

### Background color of the Waveform Window

Set the background color of the Waveform Window.

### Grid line color

Set the color of the grid lines in the Waveform Window.

### Grid line shape

Set the shape of the grid lines in the Waveform Window.

### Grid size

Set the size (in pixels) of the grid lines.

### The waveform height

Set the waveform height (16~100 pixels).

### **Tracking Cursor**

Change the tracking cursor default is Cursor E.

### Unit in the Report Window

Display the waveform values in Sample or Timestamp in the Report Window.

Sample	CH-00	CH-01	Timestamp	CH-00	CH-01
3	0	0	0.0003 ms	0	0
5	1	0	0.0005 ms	1	0
7	1	1	0.0007 ms	1	1
11	1	0	0.0011 ms	1	0
13	1	0	0.0013 ms	1	0

### **Display grid lines in the Report Window**

Display grid lines in the Report Window.

### Report track with waveform.

### Rounded to X decimal places

Round the waveform values to X (0-9) decimal places.

### X ms refresh rate for Activity

Set the refresh rate (100~1000 mini-second) for the Activity field (state and frequency). (This

feature is only available in TravelLogic Series.).

### Enable warning message

A warning message will show if any system error occurs.

### Cursor snap to transition

The cursor will snap (if close) to a transitional edge.

### **Beep when trigger succeeds**

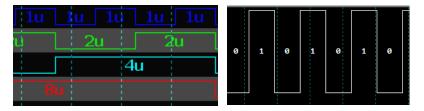

Beep when a trigger occurs.

### Show the timing / frequency in the Waveform Window

Show the timing of the waveforms' logic levels on the Waveform Window but not available

for the group channels (bus).

Show the logic state of the waveform when off the timing information.

# Beep when the memory buffer is full

Beep when the memory buffer is full.

### **Shade Alternate Channels**

Use two different colors for alternate rows to better differentiate the waveforms.

### Flick the waveforms

Flick the waveforms.

### Load Last Project

Load the last working environments (project).

	1

#### Save waveform after each acquisition

Save waveforms after each acquisition.

### Ask before exit the LA Viewer

Ask before exit the LA Viewer.

### Check software update when starts the LA Viewer

Check if there is a new version software each time when start the LA Viewer.

### Automatically enable bus decode report window

Always show bus decode report window.

### Stop repeat capturing to show the last captured waveform

Show the last complete waveform when stop repeat capturing.

### Scroll the mouse wheel to pan the waveform

Pan the waveform by the mouse wheel. Zoom in/out the waveform by "Ctrl + mouse wheel".

### Don't show logic state of channel

Do not show the logic state in the waveform.

# Show the channel transitional period in report

Show the pulse width in the waveform.

### Show the frequency in the Waveform window

Show the pulse frequency in the low state.

#### **Toolbar Buttons**

Toolbar Buttons			×

# Chapter 4 Digital Data Logger

# How to use Digital Data Logger?

#### Use time

This feature is only available in TravelLogic Series.

#### Start the Digital Data Logger

It is able to record the acquired data for a long time as a log file xxx.log and independent of the LA Viewer. To use the record model only to record the transitional data (rising or falling edge), therefore, the overall amount of data transmitted will decrease because the data don't change.

You can find and click the Data Logger icon ( 🚵 ) in the programs (Start\All

Programs\Acute Logic Analyzer\Digital Data Logger) of your PC to show the dialog box below.

🐝 Digital Data Logger	×
File	
<b>File</b>	
🗖 Bin File	Browse
🗖 Law File	Browse
🗖 Text File	Browse
⊙ Hex Mode	
🔿 Binary Mode	
Sample Rate Hz Channel	36 💌
□ Stop After Seconds Threshold 1.600 V	Threshold
Time Ø S Start Stop	Exit

#### File

Enter the file name.

#### Sample Rate

In "Hz", can be an integer or decimal number. The maximum value is 50MHz.

#### Channel

The number of channels recorded.

#### Stop after

Stop Data Logger after the time (in seconds).

#### Time

The time (in seconds) being running Data Logger.

#### **Numerical Bases**

Save the data in Hexadecimal or Binary data type.

Note: The logged file may lose some data if the sampling rate is high and will mark in the file.

If this occurs, the program will place in the data leakage, marked "Lose data".

#### **Threshold Setting**

Threshold	setting			×
1 1 1				
-6V	-3V	0V	3V	6V
Thres	hold: 1.	600 V	Save	Cancel

You may also set the threshold for the data logger.

#### **Format Convert**

👪 Digital Data Logge	er in the second se			
File				
Format Convert 🕨	Binary file to Log file	۲	Hex Mode	
Close	Binary file to Law file		Binary Mode	
	Log file to Law file			_
🗌 Law File	Binary file to Pgv file	•		

An example of the acquired data, consisting of Information (sampling rate and format in green box), Time (in decimal number when the edge changes in red box) and Data (in hexadecimal number in blue box), is shown below. The first data recording time is not necessarily 0, because the internal counter will start from power after the count. Therefore, it

is normal. If it is found much record time interval, because data did not change, so do not record data, this is normal.

The sampling rate is 1000Hz, 000000000026 in the red box denotes the edge changes at 26/1000th second and 00003FFFF in the blue box denotes the data value for 36 channels at 26/1000th second. Bit 0 of data for the channel 0.

Sampling Rate = 1 Format: Sample C	50000000Hz locks(Dec), Data(Hex)	Hex)

# Chapter 5 Miscellaneous

# **Release Note**

**Release Note** 

## Notes

Hardware:

1. Make sure that you use the USB cable in the product package. The device may be not available with other USB cable due to the poor quality of transmission.

2. Always connect the logic analyzer's ground lines to the target system in order to improve the measurement quality.

Software:

1. You can run several LA Viewer programs at the same time and if your PC has enough memory, but the second to open the LA Viewer will only demo mode.

2. You can add multiple labels with the same channel but all labels only have one trigger condition.

#### LA2000P series

1. Do NOT connect the LA2164P's printer round cable to the LA 2000P and the printer at the same time.

2. If you use the PCI interface for the LA2164P, insert the LA mainframe into the PC's lowest disk slot, so the cables will not interfere with the PC's CD-ROM drive.

3. If you use the external trigger for the LA2164P, connect the RG-58A/U (50 Ohm) coaxial cable with a BNC connector to the LA.

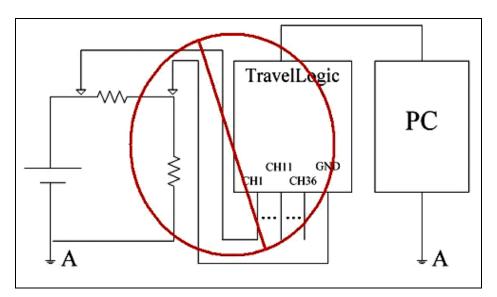

4. The USB to Printer Port Adapter Cable in the product package can only be purchased from us if you have the demand. Other general adapter would not be available due to the special design of our adapter.

5. Connect the LA2164P's four pods (pod A, B, C and D) to its four ports (port A, B, C and D) in their respectively alphabetic order unless you want to check the function of each pod.

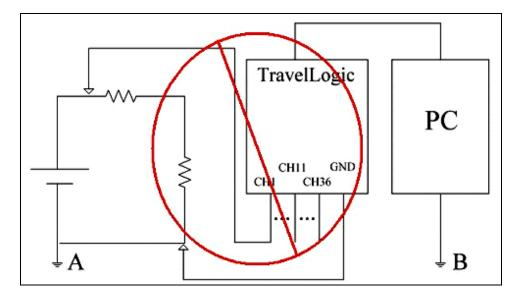

Connect the probe's ground to the earth ground ONLY, NOT an elevated voltage. Please

refer to the two figures in the next page.

Prohibition 1: Wrong connection of TravelLogic's ground.

Prohibition 2: Electric potential A and B are not equal.

# Tips

Search Next Click Search Pattern on Toolbar, set search patterns and click Search, then

move Cursor B to the trigger cursor position and click Search Next Pattern button.

Use Create Bus (Signal) to set parameters for group channels or bus.

The LA2164P model has 64 channels; but ONLY 32 channels (CH 0 ~ CH 31) support

200MHz sample rate, so connect these channels to those signals that are 200MHz from the target system.

Press A-Z key on the keyboard move the selected (key) cursor to the middle of the Waveform Window.

# Questions

Check the FAQ on our web site at <u>www.acute.com.tw</u>. We also provide tutorial videos on

Youtube: <u>www.youtube.com/user/AcuteTechnologyInc</u>.

# Troubleshooting

### Hardware

If the LA Viewer shows "Enter DEMO Mode" when the logic analyzer is connected to your

PC, please check the following steps. Please contact your local dealer or us if the LA Viewer still does not work.

#### USB interface (for the TravelLogic series, PkLA1616+ and LA2164P).

Use the original USB cable.

Check the USB interface/power connection.

Check if there is an USB driver in the Device Manager and then download and install the

latest version from <u>www.acute.com.tw</u>.

Run the LA Viewer again.

#### Printer port interface (for the LA2164P).

Check the power connection.

Check the interface cable connection.

Check if the BIOS is in any EPP mode as the table below.

Run the LA Viewer again.

#### PCI Interface (for the LA2164P).

Check the power connection.

Check the PCI card seating.

Check the interface cable connection.

Check if there is a PCI driver in the Device Manager and then download and install the latest

version (if any, uninstall the previous version first) of the LA Viewer from

#### www.acute.com.tw.

Reboot the Windows OS. Run the LA Viewer again.

Logic Analyzer Manual
